

Dear Sir or Madam,

I am currently a fourth-year engineering student at ESPRIT (École Supérieure Privée d'Ingénierie et de Technologies) in Tunisia, specializing in Cloud Computing and Cybersecurity. I am applying for the exchange semester at CESI Engineering School within the IT/Computer Science track, with a strong motivation to further develop my expertise in applied engineering and industry-driven environments.

My academic journey has been guided by a clear objective: to design and implement secure, scalable, and efficient cloud and network infrastructures. I have developed a solid technical foundation through hands-on projects, including the design of a secure multi-VLAN virtualized architecture using EVE-NG, integrating segmentation, DMZ implementation, and security validation through penetration testing. This experience allowed me to approach system architecture with both rigor and a practical mindset.

In parallel, I have developed full-stack applications using Spring Boot and Angular, as well as multi-platform solutions using Java, JavaFX, and Symfony. My specialization in cloud computing led me to complete an OpenStack-based IaaS project, covering infrastructure deployment, orchestration, and application hosting. I have also strengthened my skills in DevOps practices, including Docker, Kubernetes, Ansible, and CI/CD pipelines, enabling me to build automated and resilient systems aligned with modern industry standards.

My professional experiences have further reinforced my ability to operate in real-world technical environments. During my internships, I contributed to network configuration, system deployment, and technical support, developing adaptability, autonomy, and a results-oriented mindset. These experiences confirmed my interest in working in environments where technical skills meet operational challenges.

I am particularly attracted to CESI because of its strong connection with industry and its pedagogical model focused on learning by doing. I am convinced that this environment will allow me to consolidate my technical skills while gaining valuable insight into professional practices in France. This exchange represents a strategic step in my career path toward becoming a cloud and network engineer capable of delivering high-impact solutions in complex environments.

Highly motivated, disciplined, and committed to excellence, I am determined to fully invest myself in this program and to represent ESPRIT with professionalism and ambition.

Thank you for your consideration.

Yours sincerely,
DOGHMEN SABEE
