

PROFILE	Engineering student in Computer Science, specializing in Cloud Computing and Cybersecurity. Strong foundation in systems, networking, virtualization, and Linux environments. Skilled in backend and frontend development (Spring Boot, Angular), as well as DevOps and containerization (Docker, Kubernetes, Ansible). Motivated, rigorous, and curious, with strong analytical skills and the ability to solve complex technical problems in demanding environments.
TECHNICAL SKILLS	• Systems & Networking : VLANs, Routing, Switching, Network Security fundamentals • Operating Systems : Linux (Ubuntu, AlmaLinux) • Backend Development : Java, Spring Boot • Frontend Development : Angular • DevOps & Cloud : Docker, Kubernetes, Ansible , OpenStack • Virtualization : EVE-NG, VMware Workstation • Databases : MySQL, MongoDB • Tools : Git, GitLab CI/CD, Linux Shell • Languages : Arabic (native) , French (Professional) , English (Professional)
PROFESSIONAL EXPERIENCE	Engineering internship – OneTech Business Group June–Jully 2025 • Design and validation of multi-zone virtualized network architectures • Deployment of test environments using EVE-NG and Linux systems • Configuration of VLANs, inter-VLAN routing, and network gateways • Application and validation of network and system security rules • Execution of security tests through controlled attack simulations (Kali Linux) • Evaluation of architecture robustness after securing • Connectivity, performance, and availability testing • Technical documentation and validation reporting Summer Internship – STEG Summer 2023 • Participation in technical projects in a professional environment • Development and maintenance of applications • Technical support and incident resolution • User support and resolution of common incidents
EDUCATION	Engineering Cycle in Computer Science – Specialization in Cloud and Cybersecurity ESPRIT – Ariana, Tunisie 2022 – Present Baccalaureate in Mathematics Lycée ElMenzah 6 – Ariana, Tunisia 2019 – 2022
KEY ACHIEVEMENTS	• Design and validation of a multi-VLAN virtualized network architecture • Implementation of Linux environments for academic and technical projects • Development of web and desktop applications in an academic context • Use of DevOps tools for automation and containerization • PROJECT 1 – Network Architecture & Security (EVE-NG): Secure network architecture in a virtualized environment (EVE-NG): • Multi-VLAN design • Implementation of a DMZ • Security validation through controlled tests (Kali Linux) • PROJECT 2 – Web Application (Spring Boot / Angular): Web Application – Backend & Frontend: • Development of a backend application using Spring Boot • Design of a frontend interface using Angular • PROJECT 3 – Web + Desktop Application (Java / JavaFX / Symfony) Design and development of a multi-platform Web and Desktop application, based on Java, JavaFX, and Symfony, with data management and user interfaces. • PROJECT 4 – Cloud Project (OpenStack) Implementation of a Cloud project based on OpenStack, covering the entire IaaS cycle: • Infrastructure setup • Application development • Solution deployment
